(a)
$\Omega_+ = 1.00$
$\Omega_- = 1.26$
$\langle E_a \rangle / k_B T$
$\omega_0 t$
(b)
$e^{-E/k_B T}$
probability density
$E_a / k_B T$
(c)
small bath, $N_B = 100$
$\langle E_a \rangle / k_B T$
$\omega_0 t$
